

BEST PRACTICES ONLINE TOOLKIT

An online toolkit is now available to support the awareness and implementation efforts within your organization to better communicate results with clinical trials participants.

Incorporating feedback from clinical trials participants and the areas they identified for improvement of their participation experience, a set of best-practice recommendations was created by a group of research participants, researchers, ethics administrators, and decision makers. These recommendations have formed the foundation of this online toolkit, which is now available to you.

The toolkit can be found here: [Best practices toolkit for communicating results with clinical trial participants](#). Materials can be viewed and downloaded.

MATERIALS INCLUDE:

1. Best Practice Recommendations full document (10 pages – PDF) – in depth recommendation with background, examples and reference material
2. Postcard – Two-sided PDF to assist with promotion of the toolkit
3. Video – YouTube video with URL and ability to embed in your electronic media to assist with awareness and promotion
4. Templates – thank-you and lay-summary templates that can be modified for each study
5. Slide Deck – presentation can be modified and used for education and awareness with your researchers, patient partners or administration
6. Partner resources – links to other resources and toolkits
